DETAILED ACTION

Claim Objections

Claim 6 is objected to because of the following informalities:

Claim 6 recites a steam generating portion comprising a steam generating composition and a paper sheet formed from the steam generating composition and a fibrous substance. The examiner believes it would be clearer to describe this as a steam generating portion comprising a steam generating substance/paper sheet, wherein the steam generating composition/paper sheet is comprised of a metal powder, a salt and water a fibrous substance. The examiner interprets the claim language to disclose a steam generating portion comprising a ^astem generating substance/paper sheet, wherein the steam generating composition/paper sheet is comprised of a metal powder, a salt and water a fibrous substance. RDY

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 3739

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 6 is rejected under 35 U.S.C. 102(b) as being anticipated by Usui (USPN 5,879,378).

Regarding claim 6, Usui discloses a steam generator comprising a steam generating portion comprising a steam generating substance/paper sheet (2 and 3), wherein the steam generating composition/paper sheet is comprised of a metal powder, a salt, water and a fibrous substance, Usui also discloses an adhesive layer (7) provided on a surface on a surface of the steam generator adapted to be applied to at least one of skin of mucosa of a user of the steam generator, see col. 4-24 and figures 1-5.
